

Protection against Business and Legal Risks from the iPhone 5s Security Vulnerabilities

04.10.14

The iPhone 5s debuted with a list of new features designed to enhance its users' experience.[1] Among the list is Touch ID, a form of biometric security that allows users to lock and unlock their iPhone with their fingerprint.[2] It was not long before a crowd-funded competition was initiated with \$16,000 in cash and prizes...
